

# Test Your Soil

- If  $< .5$  in/hour then the soil is poor draining;
- if  $> .5$ "/hr it is well draining

- If  $.1$  "/hour, consider another spot or add underdrain

## Example:

- ◆ Fill the hole with 8 inches of water.
- ◆ If the water drains from the hole in 12 hours, the drainage or infiltration rate is:

8 inches divided by 12 hours = 0.67 inches per hour.
