## 1.0 INTRODUCTION

As required in Anne Arundel County's National Pollutant Discharge Elimination System (NPDES) stormwater discharge permit (Permit No. 20-DP-3316, MD0068306), the County is required to investigate and eliminate pollutant sources contributing to the Municipal Separate Storm Sewer System (MS4) from within the County's permit administration area. The purpose of the County's Illicit Discharge Detection and Elimination (IDDE) Program is to identify and eliminate non-permitted, non-stormwater discharges, and potential pollutant sources to the MS4 and to surface water. These discharges can be hazardous to public health, harmful to aquatic life in receiving waters, and damaging to water quality. Dry weather screening is performed on County MS4 outfalls that are identified in a specific target area of the County each year. The field screening includes an outfall assessment, dry weather discharge assessment, infrastructure condition assessment, and an upland pollution assessment.

Anne Arundel County's Bureau of Watershed Protection and Restoration (BWPR) designated KCI Technologies, Inc. (KCI) as the consultant on contract to conduct IDDE outfall inspections for the County during the Fiscal Year (FY) 2025 reporting period (July 1, 2024 to June 30, 2025). As stipulated by permit conditions, KCI screened a minimum of 150 outfalls within the County's NPDES permit administration area within the County's target screening area for FY2025. KCI adhered to Anne Arundel County Bureau of Watershed Protection and Restoration's Illicit Discharge Detection and Elimination Standard Operating Procedures (SOP) for Consultants and BWPR Staff (KCI 2021) for the outfall field screenings. According to the established protocols, KCI inspectors noted outfall attributes, infrastructure conditions, and evidence of dry weather flows, if present, at all outfalls selected as target sites, as defined below. If dry weather discharge was present, inspectors documented conditions relevant to the discharge and prepared to collect and test the effluent for a defined set of chemical constituents. If test results or visual observations indicated potential illicit connections, the crew investigated the drainage network contributing to the outfall and the surrounding areas to identify any possible sources of pollution, including any upland pollution sources. The crew also committed to a return visit to the outfall within 4-24 hours to re-test for the parameters that had values exceeding criteria for the initial test. If the second inspection also indicated test results out of the acceptable ranges, KCI staff alerted County personnel via a written report of the findings and called the County's Environmental Hotline. After results are determined to be outside of acceptable ranges, the field crew followed the storm drain system upstream to attempt to identify the upland source of contaminant(s). County staff then continued the process with appropriate measures to abate violations.

For the 2025 reporting period, KCI targeted 163 outfalls for field screening following Anne Arundel County Bureau of Watershed Protection and Restoration's Illicit Discharge Detection and Elimination Standard Operating Procedures (SOP) for Consultants and BWPR Staff (KCI 2021). Priority outfalls for selection were those that were 12" or greater in pipe diameter and predominantly drain commercial and industrial areas located within a geographical target area boundary predetermined by the County and KCI. This ensured that the screened outfalls were located within the target areas of the County that have the highest potential for pollution. The County aims for approximately 75% of the total number of screened outfalls to drain commercial/industrial land uses. In addition to the criteria above, outfalls with suspected or

known violations from the last reporting year were prioritized for this year. The 163 targeted sites were located in southern Anne Arundel County, constrained to the north by MD Routes 50 and the South River, including areas such as Edgewater, Mayo, Davidsonville, and Deale.

## 2.0 IDDE SCREENING METHODS

### 2.1 FIELD SCREENING/OUTFALL ASSESSMENT

Per Anne Arundel County's protocols (KCI 2021), a two-person KCI field team performed outfall inspections after a minimum of 72 hours of dry weather (defined as periods with less than 0.1 inches of total rainfall). Each outfall was inspected for the following: signs of physical deterioration (cracking, separation, or disintegration of infrastructure); verification of outfall configuration, dimensions, and position; and any evidence of dry-weather discharge. A digital photograph was taken at every inspected outfall. Outfall dimensions and flow measurements were recorded in the field using a tape measure in inches.

In addition to the outfall's attributes and condition, the outfalls were also inspected for the following physical parameters: deposits and staining, algal growth, vegetative condition, odors present, erosion, floatables, color and clarity of discharge. Deposits and staining can indicate previous illicit discharges and may require further investigation. Algal growth may indicate the presence of nutrients or sewage in the discharge and may require further investigation. Vegetative growth could be indicative of excessive nutrients if there is excessive growth, or the presence of a chemical if growth is inhibited. Any odors that were detected out of ordinary required further investigation. In addition, erosion was assessed within 25 feet of the outfall.

### 2.2 DRY WEATHER DISCHARGE

If outfalls were found to be flowing during inspection, the discharge was tested using a Hach Storm Drain Test Kit for chlorine, detergents, copper, and phenols, a Hanna Medium Range Ammonia Colorimeter test kit was used to test for ammonia-nitrogen, and a Hanna Low Range Fluoride Colorimeter was used to test for fluorides. Temperature and pH were measured at the time of sample collection with a Hach Pocket Pro probe. Results of the inspections were recorded within ArcCollector and Survey123.

If the discharge had a concentration above the threshold limit for chlorine, phenols, copper, detergents, fluorides, or ammonia, inspectors revisited the site and retested after 4 hours, but within 24 hours, to verify the result. *Dry Weather Flow and Illicit Discharges in Maryland Storm Drain Systems* (MDE, 1997) provide threshold concentrations for these constituents. Measurements above the threshold (on both tests) are considered indicative of an illicit discharge. The thresholds that were followed are listed below:

**Table 2.1 – Illicit Discharges Threshold Limits**

Constituents	Threshold Value (ppm)
Phenol	0.17
Chlorine	0.4
Copper	0.21
Detergents	0.5
Fluoride	0.75
Ammonia	1.0

An appropriate range for pH is 6.5 to 8.5. Since areas with coastal plain geography can have naturally acidic groundwater conditions, recordings of pH values between 5.0 and 6.5 were not considered illicit if all other parameters were within acceptable limits. Areas of coastal plain geography can also show characteristically high prevalence of iron flocculent bacteria that feed on the naturally occurring iron in groundwater. Iron flocculent can foul the water sample due to the suspended material and a bacterial sheen. Significant iron flocculent bacteria within a tested dry weather discharge can cause the ammonia results to be elevated and can be considered the source if all other parameters are within acceptable limits and no other sources are found in the upstream network.

If the discharge was determined to be illicit, the field team followed the storm drain system upstream to attempt to identify the source of the pollutant. In order to track illicit discharges in the storm drain system, staff followed the flow path through the network using storm drain mapping. If a discharge source was identified, or if the source could not be definitively determined but the illicit discharge was actively occurring, the field team immediately contacted the County's Environmental Hotline to report the violation and request appropriate action. If the discharge was determined not to be illicit, a source was still tracked with the findings recorded in ArcCollector and Survey123. For any outfalls containing a possible illicit connection, a concise, site-specific Illicit Discharge report was prepared and sent to the County Permit Coordinator and IDDE Project manager within 5 working days of the discovery.

## **2.3 INFRASTRUCTURE MAINENANCE AND REPAIR**

Inspections adhered to section 3 of Anne Arundel County Bureau of Watershed Protection and Restoration's Illicit Discharge Detection and Elimination Standard Operating Procedures (SOP) for Consultants and BWPR Staff (KCI 2021). Field crews assessed the structural condition at each outfall by inspecting the pipe and surrounding area at the outfall. Common issues identified included concrete spalling and cracking, metal corrosion, pipe and structure separations, excess debris, and/or sediment, scour holes, and erosion. All outfalls with structural issues were documented using Survey123.

For any outfalls with immediate physical maintenance needs, a concise, site-specific Infrastructure Condition report with photographs was prepared and sent to the County Permit Coordinator and IDDE Project Manager within 5 working days after the discovery. Each report contained the County Outfall number, location, a written description of the site and identified issues, location map with labeled streets and identifying features on an aerial photo, and site photographs documenting the conditions at the site.

## **2.4 UPLAND POLLUTION**

For discharges that were either non-detectable at the outfall, do not drain to a closed storm drain system at any accessible commercial and industrial areas, or originate from properties owned by the County not subject to the Maryland General Permit for Stormwater Discharge from Industrial Facilities within the targeted area, upland pollutant sources were identified when possible. All documented industrial and commercial areas in the targeted area of the County were identified to be inspected. If an upland pollutant source was identified, then a

point feature was created in ArcCollector and a Survey123 form was filled out. In addition, when upland pollutant sources were identified, a site-specific Upland Pollutant Source Report with photographs and locational information was prepared and sent to the County Permit Coordinator and IDDE Project Manager within five (5) working days of the discovery.

## 3.0 RESULTS

### 3.1 OUTFALL SCREENING

KCI staff inspected a total of 163 outfalls during the reporting period of July 2024 to June 2025. The inspections were conducted in November 2024 through February 2025. A map of the 163 outfall inspections and Industrial/Commercial target areas can be found in Appendix E.

The results show that, of the 163 sites, Eight (8) sites had sufficient dry weather flow to collect a sample. No detectable concentrations of phenols or copper were recorded at the outfalls where flow was sampled. One (1) outfall contained detergents below the threshold, five (5) outfalls contained ammonia below the threshold concentration, and seven (7) outfalls contained fluoride below the threshold. Two (2) outfalls were found to contain illicit discharges during the reporting period. A chemical summary can be found in the Table below. Site-specific reports for the two (2) outfalls can be found in Appendix A.

**Table 3.1 – Summary of Potential Illicit Discharges Identified During FY2025**

Outfall	Date of Test	Chlorine (mg/L)	Copper (mg/L)	Phenols (mg/L)	Detergents (mg/L)	Ammonia (mg/L)	Fluoride (mg/L)	pH
O22E8O00001	1/3/2025	<b>1.0</b>	0	0	0	0.14	0.29	7.0
B11G7O00012	11/16/2023	0	0	0	0.1	<b>1.41</b>	0.37	7.7

**Bold** = exceeds action criteria threshold

#### O22E8O00001

While completing outfall inspections, the KCI field team discovered a potential illicit discharge to Outfall O22E8O00001. The outfall was inspected and tested from the first upstream structure due to the outfall location being in a locked BMP. A high chlorine reading was taken. A reinspection of this outfall was performed four hours later. The flow remained the same with no change in chlorine (1.0mg/L) and only minor fluctuations in ammonia (0.18mg/L) and fluoride (0.24mg/L). The discharge was traced upstream to a manhole along Westbury Drive. The inlet connected to the manhole was dry, but running water could be heard. It is believed that the water is discharging from a point in the pipe connection between the manhole and inlet. All the other upstream structures were dry.

#### B11G7O00012

While completing outfall inspections, the KCI field team discovered a potential illicit discharge to Outfall B11G7O00012. After testing the sample, KCI found ammonia to exceed the allowed limit at 1.41 mg/L. A small amount of detergent (0.1mg/L) and fluoride (0.27 mg/L) were also detected but were under the screening thresholds. No odor could be detected from the sample, but a grey sheen was seen on the surface of the pooling water around the outfall. A reinspection was performed later that day. The second test resulted in similar values to before, with ammonia at 1.08mg/L and a small amount of detergent at 0.1mg/L and fluoride at 0.37 mg/L. The grey sheen seen on the pooling water was less prevalent during the second test. Staff attempted to trace the flow upstream, but access to the upstream structures was limited due to fencing behind the Golden Eagle Coin business. The two accessible upstream inlets were both dry. The

source of illicit discharge was unable to be identified. Based on past findings at the outfall, it is possible there is an illicit connection in the storm drain system that may be tied to the Travelodge or Golden Eagle; however, the specific source is still inconclusive.

### 3.2 INFRASTRUCTURE CONDITIONS

Significant maintenance needs of stormwater infrastructure were noted at six (6) outfalls. Site-specific reports for the outfalls experiencing significant infrastructure issues are detailed below and can be found in Appendix B.

Table 3.2 – Infrastructure Repair and Maintenance Report Summary for FY2025				
Location	Town	Outfall ID	Inspection Date	Issue
1599-1575 Patuxent Manor Rd	Davidsonville	J25F4O00001	11/18/2024	Joint separation and erosion.
4400-4414 Sands Rd	Harwood	J29A1O00004	11/18/2024	Missing upstream manhole lid.
599-501 Shadowbrook Ct	Davidsonville	L26F4O00001	11/18/2024	Severe downstream and upstream erosion exposing pipe. Abandoned pipes upstream.
34 Mayo Rd	Edgewater	P23H4O00001	12/02/2024	Missing upstream manhole lid.
2222 Shore Dr	Edgewater	Q24B3O00001	12/02/2024	Trash and debris block downstream flow.
3451 Solomons Island Rd	Edgewater	P24D8O00001	12/05/2024	Erosion around the outfall and downstream embankments. Outfall pipe separating from hillside.

#### 1599-1575 Patuxent Manor Road – Outfall J25F4O00001

KCI identified moderate downstream erosion and a hole forming above Outfall J25F4O00001 indicating a joint separation is occurring.

#### 4400-4414 Sands Road – Outfall J29A1O00004

KCI identified a missing manhole lid at Outfall J29A1O00004. The missing manhole lid is posing a safety issue.

#### 599-501 Shadowbrook Court – Outfall L26F4O00001

KCI identified moderate to severe upstream erosion exposing Outfall L26F4O00001. Moderate downstream erosion is also present. Two secondary corrugated metal pipes were found upstream and are in bad condition, but these are assumed to be abandoned.

#### 34 Mayo Road – Outfall P23H4O00001

KCI identified a missing upstream manhole lid at Outfall P23H4O00001. The missing manhole lid is half covered with old wood planks and leaf debris posing a safety issue.

#### 2222 Shore Drive – Outfall Q24B3O00001

KCI identified a significant amount of trash and debris at Outfall Q24B3O00001. Multiple downed trees and a basketball hoop stand, as well as other trash and debris, are blocking the outfall pipe. The outfall and downstream channel need to be cleared to allow discharge from the pipe to freely flow.

#### 3451 Solomons Island Road – Outfall PP24D8O00001

KCI identified severe erosion around Outfall P24D8O00001. The embankment erosion occurring downstream of the outfall is causing trees to uproot and deep channels to form. The erosion upstream is causing severe undermining and separation of the outfall structure from the surrounding hillside.

### **3.3 COMMERCIAL AND INDUSTRIAL FACILITY INSPECTIONS**

A total of 267 commercial and industrial property polygons were visually surveyed in the reporting year. Two hundred fifty (250) of the identified commercial/industrial polygons represented commercial land uses, and seventeen (17) represented industrial land uses. A map of the visually surveyed commercial and industrial target areas can be found in Appendix E. During July 2024 – June 2025, there were nineteen (19) cases of upland pollution related to water quality that were reported to BWPR. Each report was investigated and resolved using Anne Arundel County staff, MDE, and other state agencies. A summary of the findings is listed below with the site-specific reports found in Appendix C.

**Table 3.3 – Summary of Upland Pollutant Source Findings for FY2025**

Address	Town	Business Name	Inspection Date	Issue
173 Mitchell's Chance Rd	Edgewater	Coopers Tavern	10/16/2024	Grease bin and pavement staining
3115 Solomons Island Rd	Edgewater	Flagship Carwash	10/16/2024	Active vehicle washing runoff
832 Shore Dr	Edgewater	Londontowne Marine	10/16/2024	Improperly stored chemical materials
120 Mitchells Chance Rd	Edgewater	URBurger	10/16/2024	Grease bin and pavement staining

**Table 3.3 – Summary of Upland Pollutant Source Findings for FY2025**

<b>Address</b>	<b>Town</b>	<b>Business Name</b>	<b>Inspection Date</b>	<b>Issue</b>
1246 Mayo Rd	Edgewater	Bayside Inn	10/17/2024	Improperly stored chemical materials
4079 Cadle Creek Road	Edgewater	Casa Rio Marina	10/17/2024	Improperly stored chemicals and stockpiles
3365 Pocahontas Dr	Edgewater	Pocahontas Marina	10/17/2024	Improperly stored stockpiles
3553 Loch Haven Dr	Edgewater	South River Farm Park	10/17/2024	Improperly stored stockpiles
619 Central Avenue East	Edgewater	Sue's Deli	10/17/2024	Grease bin and pavement staining
3350 Patuxent River Rd	Davidsonville	Amazon Construction Inc.	10/18/2024	Improperly stored stockpiles
3200 Patuxent River Rd	Davidsonville	Contractors Precast Corporation	10/18/2024	Improperly stored stockpiles

436 W Central Ave	Davidsonville	Statewide Septic and Backhoe	10/18/2024	Improperly stored stockpiles
3259 Beards Point Rd	Davidsonville	Statewide Septic and Backhoe	10/22/2024	Improperly stored stockpiles

**Table 3.3 – Summary of Upland Pollutant Source Findings for FY2025**

Address	Town	Business Name	Inspection Date	Issue
5570 Shady Side Rd	Deale	Christopher's Fine Foods	10/30/2024	Grease bin and pavement staining
533 Deale Rd	Deale	Happy Harbor Restaurant	10/30/2024	Grease bin and pavement staining
389 Deale Rd	Tracys Landing	Herrington Harbour North.	10/30/2024	Improperly stored stockpiles
6158 Drum Point Rd	Deale	Skipper's Pier Restaurant & Dock Bar.	10/30/2024	Grease bin and pavement staining

**Coopers Tavern**

KCI inspectors discovered a grease bin with heavy staining on the pavement behind Coopers Tavern located at 173 Mitchell's Chance Rd.

**Flagship Carwash**

KCI inspectors discovered car wash fluid runoff going into the storm drain on the property of Flagship Carwash at 3115 Solomons Island Rd.

**Londontowne Marina**

The KCI inspectors discovered improperly stored chemical materials on the property of Londontowne Marina at 832 Shore Dr. Staff observed several 55-gallon drums left exposed and without secondary containment but it's unclear if they contain product.

**URBurger**

KCI discovered a grease bin with moderate staining on the pavement alongside URBurger located at 120 Mitchells Chance Road.

**Bayside Inn**

KCI discovered improperly stored chemical materials on the property of Bayside Inn located at 1246 Mayo Road. Frying oil was found to be improperly stored outside. Mop with bucket being improperly stored outside.

**Casa Rio Marine**

KCI discovered improperly stored chemical materials on the property of Casa Rio Marina. Barrels of antifreeze stored outside. A stone/gravel stockpile was also located on the Casa

Rio Marina property located at 4079 Cadel Creek Road.

Pocahontas Marina

KCI discovered a dirt/mulch stockpile being improperly stored on the property of Pocahontas Marina located at 3365 Pocahontas Drive.

South River Farm Park

The KCI inspectors discovered a salt and/or sand stockpile being improperly stored on the property of South River Farm Park located at 3553 Loch Haven Drive.

Sue's Deli

KCI discovered a grease bin with heavy staining on the pavement behind Sue's Deli located at 619 Central Avenue East. Staff observed an excessive amount of grease accumulating on the top of the bin.

Amazon Construction Inc.

The KCI field team discovered a Dirt/Sand/Stone stockpile being improperly stored on the property of Amazon Construction inc located at 3350 Patuxent River Road.

Contractors Precast Corporation

KCI discovered a sand/stone stockpile being properly stored on the property of Contractors Precast Corporation located at 3200 Patuxent River Road.

Harvest Thyme Tavern

KCI discovered a grease bin with moderate staining on the pavement behind Harvest Thyme Tavern located at 1251 W Central Avenue.

Miller's Auto Service

The KCI inspectors discovered a stone stockpile being improperly stored on the property of Miller's Auto Services located at 669 W Central Avenue.

Statewide Septic and Backhoe

KCI discovered a stockpile of varying materials including dirt, trash and gravel being improperly stored on the property of Statewide Septic and Backhoe located at 436 W Central Avenue.

Statewide Septic and Backhoe

KCI discovered a gravel stockpile and a debris stockpile being improperly stored on the property of Statewide Septic & Backhoe located at 3259 Beards Point Rd.

Christopher's Fine Foods

KCI discovered a grease bin with heavy staining on the pavement behind Christopher's Fine Foods located at 5570 Shady Side Road.

Happy Harbor Restaurant

KCI discovered a grease bin with staining on and around itself at Happy Harbor

Restaurant located at 533 Deale Road.

Herrington Harbour North

KCI discovered multiple dirt/sand/stone stockpiles on the property of Herrington Harbour North located at 389 Deale Road.

Skipper's Pier Restaurant & Dock Bar

KCI discovered a grease bin with heavy staining on the pavement and on itself behind Skipper's Pier Restaurant & Dock Bar located at 6158 Drum Point Road.

### 3.4 COUNTY-OWNED PROPERTIES

KCI inspectors additionally screened three (3) County-owned properties located within the target area for FY2025. County site managers as well as on-site staff accompanied KCI inspectors for each inspection; therefore, conditions were documented but no reports filed for any potential violations discovered.

Table 3.4 – Summary Of County-Owned Property Inspection Findings for FY2025				
Address	Town	Business Name	Inspection Date	Issue
35 Stepneys Lane	Edgewater	Southern District Police Station	12/02/2024	No violations observed
5165 Solomons Island Road	Lothian	Fire Company 9 - Harwood/Lothian Fire Station	02/04/2024	Structure of corrugated metal pipe starting to corrode
3737 Elmer F. Hagner Lane	Davidsonville	Charles B. Butch Troyer Police Training Center	02/04/2024	Sediment buildup in outfall

## 4.0 SUMMARY

To assist with Anne Arundel County's Illicit Discharge Detection and Elimination program and to fulfill the requirements of the County's NPDES permit requirements, KCI inspected 163 outfalls and visually assessed 267 commercial and industrial property polygons for the 2025 reporting year. The table below summarizes the findings of the 163 outfalls inspected based on the observations made. Fifty-one (51) outfalls were found to be totally or partially submerged or contained standing water with no flow. Algae were found at fourteen (14) outfalls. No outfalls had a color variation. Ninety-four (94) outfalls contained trash, leafy debris and/or sediment deposition. Moderate erosion was occurring at fourteen (14) outfalls and severe erosion was occurring at another four (4) outfalls. As mentioned above, there were two (2) potential illicit discharges detected, six (6) structural repair and maintenance reports submitted, and nineteen (19) upland pollutant reports submitted.

**Table 4.1 – Summary Of Outfall Conditions and Observations Made During the FY2025 Field Screening.**

Condition	Number of Outfalls
Observable Flow	8
Phenol Present	0
Chlorine Present	1
Detergents Present	1
Copper Present	0
Ammonia Present	6
Fluoride Present	7
Excessive Vegetation	0
Algae Growth	14
Floatables Present	8
Sediment Deposits	78
Other Deposits	8
Moderate Erosion	14
Severe Erosion	4
Odor Present	2
Color Present	0
Cloudy Clarity	1

## 5.0 ENFORCEMENT ACTIONS

Table 5.1 details all illicit discharge, upland pollution, and infrastructure concerns arising from the permit-required dry-weather screening of outfalls and routine visual surveys of commercial and industrial drainage areas during the reporting year. As is presented in Table 5.1, significant findings from the FY2025 field investigations were sent to the responsible authorities for action. Site-specific reports of potential illicit connections and upland pollutant sources (e.g., leaking or overflowing dumpsters) identified during the investigations for the FY2025 reporting period were referred to either the County's Department of Inspections and Permits (I&P) or the Department of Health. Structural issues identified during the reporting period were forwarded to the County's Stormwater Infrastructure Program (SIP) to determine ownership of the infrastructure; then, SIP or I&P addressed the problems based on whether the infrastructure was publicly or privately owned, respectively.

Occasionally, complex cases from prior reporting periods were not resolved in time for a particular year's summary report; such cases are typically reported as unresolved. Table 5.2 contains details of FY2025 enforcement actions taken on previously unresolved IDDE program cases.

In FY2025 I&P responded to an additional 20 complaints related to potential illicit discharges. Details of these complaints and County staff actions are provided in Appendix D, which contains inspection compliance database reports from the I&P Case Manager Complaint Tracking System for illicit connections, upland pollutant sources, or environmental hotline complaints relevant to this report. These reports detail the County efforts taken to investigate and remediate the complaints.

I&P applies a progressive approach to enforcement regarding illicit discharges. In general, Phase I enforcement begins with coordination with MDE, as applicable, for joint investigation. If the violator has an active 12-SW permit, MDE takes over full enforcement authority. If no 12-SW permit is active, I&P will issue a Correction Notice to violator to address violation within timeframe specific to type of incident. If violation still exists upon follow-up inspection, I&P will issue a second Correction Notice. If the violation still exists after two Correction Notices, I&P may issue a third Correction Notice or proceed with Phase II enforcement, which entails issuing a Violation Letter and Non-Compliance Notice, sent to the violator via certified mail. If the violation has still not been addressed upon follow-up inspections, I&P will proceed with Phase III enforcement which includes filing a legal injunction through the County's Office of Law and may issue a civil citation with Class C fines based on the County's Civil Fines Schedule. No civil citations were issued by I&P in FY2025 for violations stemming from IDDE-related surveys.

The Anne Arundel County Department of Health may choose to issue civil citations for violations of the Anne Arundel County Property Maintenance Code regarding rubbish, garbage, or sanitation. Before the issuance of a citation, property owners are issued a written warning in the form of a Notice of Violation, giving the property owner 30 days to correct the violations

before legal action is taken. If violations are not corrected following the issuance of a Notice of Violations, a citation may be issued. After a citation is issued, it is attempted to be served by a third-party server. Upon service, the property owner has 20 days to pay the fine and correct the violation, or 15 days to elect - via written response - to stand trial. After 20 days have passed since the initial inspection, the property is re-inspected for compliance. If the citation was unable to be served, the property is re-inspected immediately after receiving notice it was unable to be served. If violations remain at that point, the Department of Health may file for injunction. Once a citation or injunction is referred to the Office of Law, the property is re-inspected every 30 days until the trial date or until the violation is corrected. No civil citations were issued by the Department of Health in FY2025 for violations stemming from IDDE-related surveys.

**Table 5.1. FY2025 IDDE Program investigative activities and follow-up actions.**

ILLICIT DISCHARGES						
Survey Date	I&P Compliance Database ID	Outfall/Site Address	Issue	Response	Status	
1/3/2025	N/A	Outfall O22E8O00001  3205 Wordsworth Dr, Riva, MD 21140	<p>On January 3, 2025, while performing IDDE outfall inspections for Anne Arundel County, KCI Technologies, Inc. discovered a potential illicit discharge with high chlorine results discharging from Outfall O22E8O00001. The outfall was inspected and tested from the first upstream structure due to the outfall location being in a locked BMP. There was steady flow out of the upstream structures to the outfall. An IDDE test was conducted. Chlorine (1.0 mg/L) was found to be above the screening thresholds. A small amount of ammonia (0.14mg/L) and fluoride (0.29mg/L) were detected along with a strong chlorine odor. The discharge was traced upstream to a manhole along Westbury Drive. The inlet connected to the manhole was dry, but running water could be heard. It is believed that the water is discharging from a point in the pipe connection between the manhole and inlet. All other upstream structures were dry.</p> <p>A reinspection of this outfall was performed four hours later. The flow remained the same with no change in chlorine (1.0mg/L) and only minor fluctuations in ammonia (0.18mg/L) and fluoride (0.24mg/L). The source of the discharge is believed to be a water line break leaking into the stormdrain. Recent pavement work could be seen near the manhole and the inlet that may have contributed to the leak. The Utilities Emergency Line was called, notifying them of the discharge.</p> <p>OUTFALL LOCATION: Next to 3205 Wordsworth Dr, Riva, MD 21140. MANHOLE LOCATION: In front of 395 Westbury Dr, Riva, MD 21140.</p>	<p><b>1/6/2025:</b> Report received by BWPR <b>1/21/2025:</b> Followed up with Bureau of Utilities. Water main break was identified and has been repaired.</p>	<b>RESOLVED</b>	<b>CASE CLOSED</b>

2/4/2025		Outfall B11G7O00012  3386 Fort Meade Rd, Laurel, MD 20724	<p>On February 4, 2025, while performing a follow up inspection for previous years' potential illicit discharge areas, KCI Technologies, Inc. discovered flowing water from outfall B11G7O00012. After testing the sample, KCI found ammonia to exceed the allowed limit at 1.41 mg/L. A small amount of detergent (0.1mg/L) and fluoride (0.27 mg/L) were also detected but were under the screening thresholds. No odor could be detected from the sample, but a grey sheen was seen on the surface of the pooling water around the outfall.</p> <p>A reinspection was performed later that day. The second test resulted in similar values as before, with ammonia at 1.08mg/L and a small amount of detergent at 0.1mg/L and fluoride at 0.37 mg/L. The grey sheen seen on the pooling water was less prevalent during the second test.</p> <p>Staff attempted to trace the flow upstream, but access to the upstream structures were limited due to fencing behind the Golden Eagle Coin business. The two accessible upstream inlets were both dry. The source of illicit discharge was unable to be identified. Based on past findings at the outfall, it is possible there is an illicit connection in the stormdrain system that may be tied to the Travelodge or Golden Eagle, however the specific source is still inconclusive.</p>	<p><b>2/6/2025:</b> Report received by BWPR  <b>2/6/2025:</b> Report forwarded to I&amp;P for investigation.  <b>4/7/2025:</b> I&amp;P coordinating with Utilities to video cam the nearby sewer and stormdrain lines in attempt to identify illicit cross-connections.</p>	<p><b>UNRESOLVED</b>  <b>– Investigation Ongoing</b></p> <p><b>CASE OPEN</b></p>

12/15/2023		Outfall B11G7O00012  3380 Fort Meade Rd, Laurel, MD 2072	<p>On December 15th, 2023, while performing a follow up inspection for previous years' potential illicit discharge areas, KCI Technologies, Inc. discovered flowing water from outfall B11G7O00012. After testing the sample, KCI found ammonia to exceed the allowed limit at 3.6 mg/L. A small amount of detergent (0.1mg/L) was detected under the screening threshold. No odor could be detected from the sample, but a grey sheen was seen on the surface of the pooling water around the outfall.</p> <p>A reinspection was performed later that day. The second test resulted in the same values as before, with ammonia at 3.6mg/L and a small amount of detergent at 0.1mg/L. The grey sheen seen on the pooling water previously had moved further downstream and a musty odor could now be detected from the sample. A flow was traced to an upstream inlet where water pooled and slowly released the illicit discharge. Public dumping of appliances and unlabeled chemicals were found around the side of one building, but a specific source of a spill or water source was unable to be located. Based on past findings at the outfall by the County, it is possible there is an illicit connection in the stormdrain system that may be tied to the Travelodge laundry activities however the specific source is still inconclusive.</p>	<p><b>12/15/2023:</b> KCI reported illicit discharge to environmental hotline.  <b>12/15/2023:</b> Report received from KCI  <b>12/19/2023:</b> Report forwarded to I&amp;P  <b>03/27/2024:</b> Investigated by BWPR Staff. No flow observed at outfall. Potential good housekeeping issues observed on Travelodge property. Reported illicit discharges suspected to be intermittent emptying of washwater into stormdrain by Travelodge, but cannot confirm. Will revisit outfall as part of FY25 IDDE screening.  <b>2/6/2025:</b> Outfall re-screened by KCI. Illicit discharge confirmed. See <b>Table 5-1</b> of this report for details of current investigation.</p> <p><b>CASE CLOSED</b></p>	<b>UNRESOLVED – Investigation Ongoing</b>

ARUNDEL COUNTY**

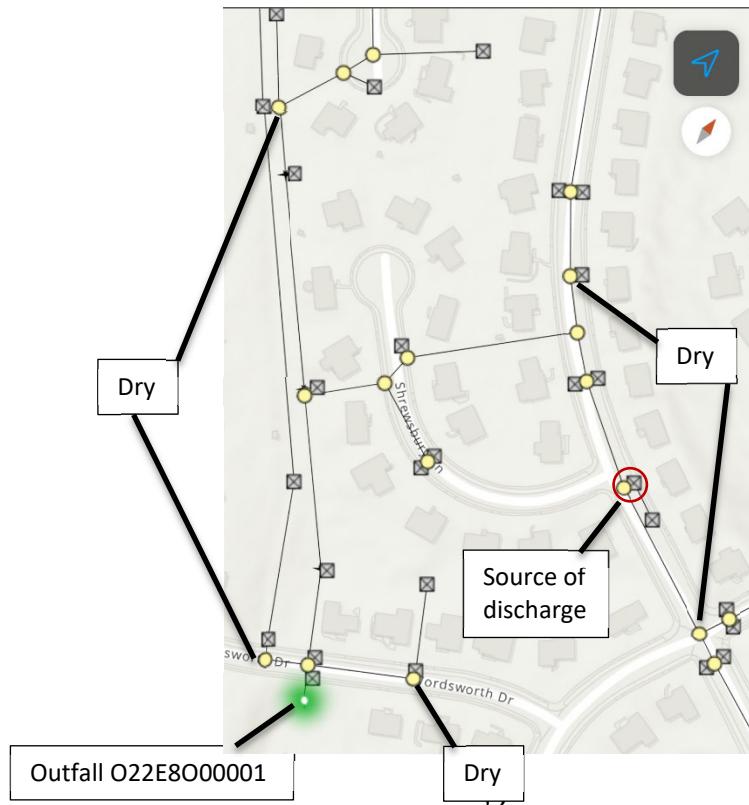

**Anne Arundel County IDDE Outfall Screening  
Potential Illicit Discharge Report  
Outfall O22E8O00001**

On January 3, 2025, while performing IDDE outfall inspections for Anne Arundel County, KCI Technologies, Inc. discovered a potential illicit discharge with high chlorine results discharging from Outfall O22E8O00001. The outfall was inspected and tested from the first upstream structure due to the outfall location being in a locked BMP. There was steady flow out of the upstream structures to the outfall. An IDDE test was conducted. Chlorine (1.0 mg/L) was found to be above the screening thresholds. A small amount of ammonia (0.14mg/L) and fluoride (0.29mg/L) were detected along with a strong chlorine odor. The discharge was traced upstream to a manhole along Westbury Drive. The inlet connected to the manhole was dry, but running water could be heard. It is believed that the water is discharging from a point in the pipe connection between the manhole and inlet. All the other upstream structures were dry.

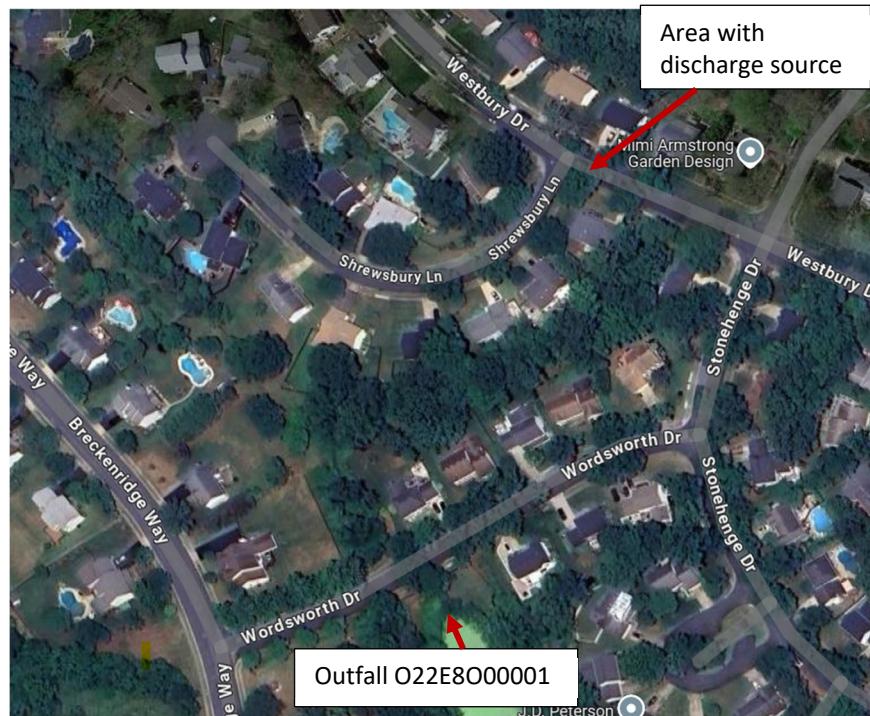

A reinspection of this outfall was performed four hours later. The flow remained the same with no change in chlorine (1.0mg/L) and only minor fluctuations in ammonia (0.18mg/L) and fluoride (0.24mg/L). The source of the discharge is believed to be a water line break leaking into the storm drain. Recent pavement work could be seen near the manhole and the inlet that may have contributed to the leak. The Utilities Emergency Line was called, notifying them of the discharge.

**OUTFALL LOCATION:** Next to 3205 Wordsworth Dr, Riva, MD 21140.

**MANHOLE LOCATION:** In front of 395 Westbury Dr, Riva, MD 21140.

**Potential Illicit Discharge Report**  
**Outfall B11G7O00012**

On February 4<sup>th</sup>, 2025, while performing a follow up inspection for previous years' potential illicit discharge areas, KCI Technologies, Inc. discovered flowing water from outfall B11G7000012. After testing the sample, KCI found ammonia to exceed the allowed limit at 1.41 mg/L. A small amount of detergent (0.1mg/L) and fluoride (0.27 mg/L) were also detected but were under the screening thresholds. No odor could be detected from the sample, but a grey sheen was seen on the surface of the pooling water around the outfall.

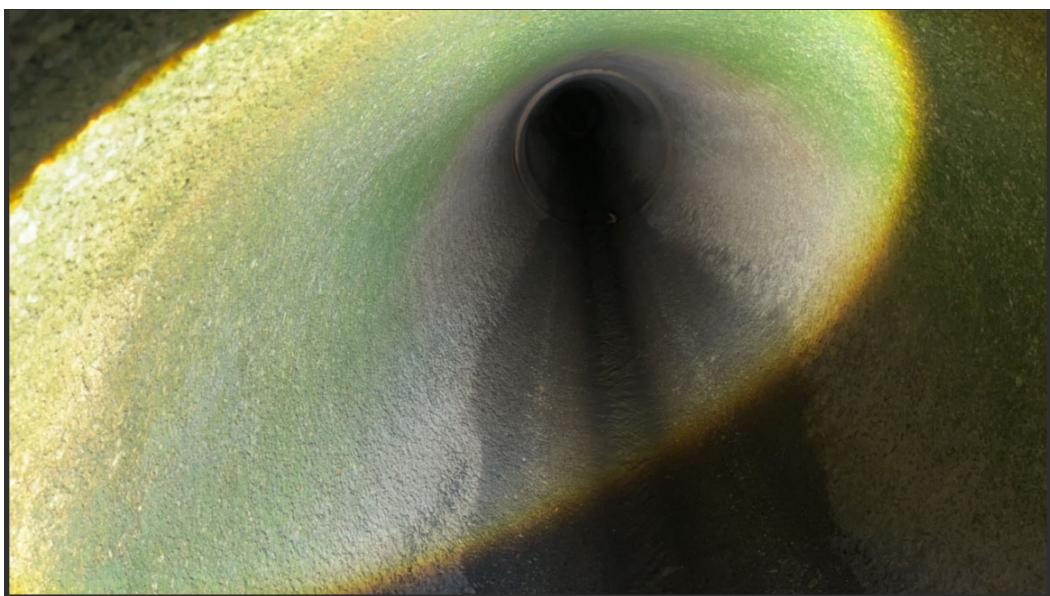

A reinspection was performed later that day. The second test resulted in similar values to before, with ammonia at 1.08mg/L and a small amount of detergent at 0.1mg/L and fluoride at 0.37 mg/L. The grey sheen seen on the pooling water was less prevalent during the second test. Staff attempted to trace the flow upstream, but access to the upstream structures was limited due to fencing behind the Golden Eagle Coin business. The two accessible upstream inlets were both dry. The source of illicit discharge was unable to be identified. Based on past findings at the outfall, it is possible there is an illicit connection in the storm drain system that may be tied to the Travelodge or Golden Eagle; however, the specific source is still inconclusive.

LOCATION: 3386 Fort Meade Rd, Laurel, MD 20724

## Case Details

Auto cleaning service operating out of garage, discharge going into the road and into the MS4. Discharge to the MS4 from an auto cleaning service is not allowed. Per the County's MS4 Permit, only individual residential car washing is allowed to discharge to the MS4, and must be properly managed if doing so. Discharge from an auto cleaning service must either: 1) go into the County's sanitary sewer system (with the proper permits from DPW); or 2) go into a holding tank, or somehow contained/reclaimed by the business operators, for collection, and then disposal at an approved site. Any discharge to the MS4 from an auto cleaning service, from multi-residential car washing, or from improperly managed individual residential car washing, is a violation of Anne Arundel County Code, Article 16, Title 5, ?16-5-101, ?(6): "It is a violation of this article to spill, dump or dispose of any material or substance other than natural stormwater runoff to a stormdrain or watercourse unless authorized by a valid NPDES permit issued by the State of Maryland."

## Case Details

Dry cleaning business occupies building. Six pipes draining out of building into alleyway, may be discharging something other than clean water. Per the County's MS4 Permit, non-stormwater discharges are prohibited from entering the MS4 or watercourses. While there are exceptions for certain sources as long as they're properly managed, effluent from dry cleaning operations is not one of them. According to Anne Arundel County Code, Article 16, Title 5, §16-5-101, §(6): "It is a violation of this article to spill, dump or dispose of any material or substance other than natural stormwater runoff to a stormdrain or watercourse unless authorized by a valid NPDES permit issued by the State of Maryland."

### Note

Investigated area in question from KCI report. There is currently no salt pile, but I did speak with a shift manager to let them know for the upcoming winter that any salt piles will need to be covered when not in use.

### Note

Investigated car wash and found no pre-washing currently taking place. Also, verified that the car wash infrastructure on site is not tied to any storm drains. The car wash is piped to an on-site sump pit/grinder pump system that is tied into to the County sanitary sewer (2" force main) on Holsum Way.

### Note

Investigated area/property per the complaint. At time of investigation, did not witness any active fuel leaks and there were no vehicles parked on the street. There was a boat parked down the street from property in question, but had no active leaking. Closing case for illicit/illegal discharge at this time, but will monitor in the future. In regards to the cinder blocks on the street, I did see some that were broken up in the curb/gutter line. Requests for trash/debris/litter removal, please contact your local road district to make a report (Eastern Road District - 410-222-6120).

### CLOSE COMPLAINT

DUE TO THE REGISTERED SEPTIC SYSTEM WITH THE DEPARTMENT OF HEALTH, AND NATURE OF COMPLAINT IS SPECIFIC TO AN ALLEGED DISCONNECTION FROM A SANITARY SYSTEM/SEPTIC SYSTEM AND/OR DRAIN FIELD, THE DEPARTMENT OF HEALTH IS LEAD AGENCY TO ADDRESS SINCE THERE HAS BEEN NO DIRECT OBSERVATION/WITNESSING OF THE VIOLATION BY A COUNTY INSPECTOR OR SUBMITTED DATE STAMPED GEO REFERENCED VIDEO EVIDENCE OF THE VIOLATION ACTIVELY OCCURRING. INSPECTOR FORD, WHILE CONDUCTING ROUTINE INSPECTIONS IN THE PASADENA AREA MAY CONTINUE TO MONITOR LOCATION AND IF SOAPY WASHING MACHINE DISCHARGE IS OBSERVED, WILL RE-OPEN CASE.

APRIL 28, 2025 by: ipford22

### Customer Contact

INSPECTION ATTEMPTED, NO PERMISSION TO ACCESS PROPERTY. NO EVIDENCE OR OBSERVATION OF ACTIVE OR PRIOR WASHING MACHINE SOAPY DISCHARGE.

APRIL 28, 2025 by: ipford22

### Customer Contact

INSPECTION ATTEMPTED, NO PERMISSION TO ACCESS PROPERTY. NO EVIDENCE OR OBSERVATION OF ACTIVE OR PRIOR WASHING MACHINE SOAPY DISCHARGE

APRIL 28, 2025 by: ipford22

## OPENED COMPLAINT CASE

INSPECTOR FORD CONDUCTED DESKTOP REVIEW OF THE SITE LOCATION TO DETERMINE IF THE PROPERTY HAS AN EXISTING STORMWATER MANAGEMENT INSPECTION DUE, IF THE SITE IS CRITICAL/SENSITIVE AREA, WATERFRONT AND/OR PROBLEMATIC SEPTIC AREA. SITE DOES NOT HAVE STORMWATER MANAGEMENT, PRE-DATES STORMWATER MANAGEMENT AGREEMENT REQUIREMENT. PROPERTY DOES HAVE A SEPTIC SYSTEM. DUE TO THE EXISTING SEPTIC SYSTEM AND NATURE OF COMPLAINT, THE DEPARTMENT OF HEALTH TEAM WILL BE NOTIFIED OF THE POSSIBLE ALLEGED DISCONNECTION FROM REQUIRED SANITARY TREATMENT. COMPLAINT WILL BE DUALLY ADDRESSED BY BOTH AGENCIES.

### Note

Inspected the property pumping from the pool. Homeowner was not home but contractors were on-site doing work to the pool. It was determined they were pumping rain water from the weekend/that day and it was not chlorinated. Closing case

### Note

INSPECTOR FORD CONDUCTED AN ON-SITE INVESTIGATION ON 5/7/2025, COMMENCING WITH THE SPECIFIED INLET AND TRACING UPLAND TO ATTEMPT TO LOCATE THE ALLEGED LAUNDRY SOAP GRAY WATER DISCHARGE SOURCE. AT THE TIME OF THE INSPECTION, NO SOAPY DISCHARGE OR SUDS WERE OBSERVED, NOR WAS THE ODOR OF LAUNDRY SOAP DETECTED. WATER SAMPLE TAKEN AT INLET OFF CHESAPEAKE DRIVE TO BE TESTED FOR DETERGENTS. IF THE DISCHARGE IS CAUSED BY A DISCONNECTION FROM A SEPTIC TANK, DRAIN FIELD, OR SANITARY SYSTEM; THE AACO DEPARTMENT OF HEALTH WILL BE ENGAGED TO ADDRESS THE DISCONNECTION. COMPLAINT WILL REMAIN OPEN IN ATTEMPT TO OBSERVE ALLEGED LAUNDRY SOAP DISCHARGE. DURING INITIAL INSPECTION, PERMISSION GRANTED TO ACCESS STORM DRAIN EASEMENT ON CHESAPEAKE ROAD. CASE REMAINS OPEN WITH ADDITIONAL ON-GOING INSPECTIONS TO FOLLOW.

MAY 12, 2025 by: ipford22

### OPENED COMPLAINT CASE

WENDY HUANG, MDE WATER COMPLIANCE SPECIALIST RECEIVED A COMPLAINT ALLEGING THE ODOR AND SUSPECTED DISCHARGE OF LAUNDRY SOAP FROM A COUNTY STORM INLET LOCATED NEAR THE COMPLAINANT'S PROPERTY. MDE REFERS IDDE COMPLAINTS TO THE COUNTY TO INVESTIGATE AND ADDRESS UNDER THE COUNTY NPDES MS-4 PERMIT. COMPLAINT TO BE INVESTIGATED BY THE COUNTY.

### CLOSE COMPLAINT

I spoke with the residents after I arrived on site, the residents were running their well off to get a positive/passing test. A garden hose was attached to the outside faucet and laid out across the front yard, and there was a slow flow of water coming out of the hose. I spoke with Brad and he told me there was no problem with what they were doing in regards to MS4 potable water parameters.

### CLOSE COMPLAINT

Complaint sent to DPW

JUNE 3, 2025 by: ipghol21

### Note

6/3/25: Investigated area and found sump pump discharge point right next to sidewalk. Water flows over sidewalk into curb line and then down the street to the nearest storm drain. Took pictures but was unable to load them into case manager (even after re-sizing).

### CLOSE COMPLAINT

residents were not discharging sewage into Magothy River, there were contractors onsite installing a new sump pump and new piping along the approximate area where the original was installed.

## Case Timeline

Last updated on Jun 26, 2025 by Kyle Frederickson

### Note

6/26/25: Follow-up inspection. Oil absorbent is still presently spread throughout the area of leaking containers. Verified that none of the larger 55 gal drums are actively leaking. Station manager was not present, but spoke with cashier (Linda) who informed me that this was at least the second round of oil absorbent that was put down. The first round was cleaned up and properly disposed of, but they spread out some more to get as much residue up as possible. Left a voicemail and sent email to station manager to let him know the oil absorbent currently on the pavement still needs to be swept up and properly disposed. Will return next week to verify.

JUNE 26, 2025 by: ipfred23

### Note

6/19/25: Received email and picture from the station manager on 6/19/25 showing that all actively leaking containers and/or drums have been removed. All small containers not owned or being used for business purposes have also been removed. Oil absorbent was spread throughout the entire area where the containers were leaking. Will return next week to confirm the oil absorbent has been cleaned up.

JUNE 26, 2025 by: ipfred23

## Note

6/10/2025: Investigated area of concern. Found multiple containers of oil/automotive fluids actively leaking on the pavement. Spoke with station manager who claims they only use the larger 55 gal drums for business purposes and that all other small containers are dropped off without their knowledge. They have posted signs on the building to try and deter this behavior to no avail. They have also spoken with police previously, but since they have no camera's on that side of the building, it is hard to catch people in the act. Due to active leaking, a correction notice has been sent to: 1) Properly remove and dispose of any actively leaking containers and/or drums 2) Properly remove and dispose of all small containers that are not owned or being used by the station for business purposes 3) Once containers are removed/disposed of, apply an oil absorbent material on the asphalt to clean up any liquid/residue and properly dispose of this material. Will follow-up to confirm the required actions have been taken.

## Case Details

Email from complainant:

"Hello Mr. Burnham,

...After phone conversations first with AA County Public Works and then with Zoning Administration today, I was directed to contact you concerning what I believe might be questionable activity and/or violations at my neighbor's house and to see if you had any advice or direction to send me for answers.

Here is the background...

Two weeks ago at about 11 PM, we noticed that my neighbor at 1208 Dicus Mill Road had a hose originating from somewhere inside his house discharging water full-force onto his front driveway and running into the gutter and storm drain. Both the front door and side door were wide open and the lights inside the house were off. My adult son had come home late and after he noticed the situation next door, he called the police because he feared something had happened to the resident(s). When the police arrived, they stood outside the neighbor's front door and yelled for someone to come out. After a few minutes a man came to the door and said something about "Sump". At that point the police just said "Ok" and left.

Since that time, we have noticed that the hose is still being put out and water is still being discharged full force into the front yard and into the storm drain. We have also noticed that there is a second hose into the back yard. The hose in the front yard is usually out only overnight and in the early morning the hose is taken back, put out of sight and no longer visible. Some evenings it is put back outside around dinnertime and stays on, I can only assume, all night. Since so much water is being discharged and this neighborhood is on well water, we are concerned about what might be happening to the aquifer. This has been happening daily for over two weeks. I don't know if there is anything illegal going on at the residence, but my main concern is the possible demise of my well water.

...

My main concern is the amount of water being discharged and what might be ending up in the storm drain, and ultimately affecting the ground water in this area. The community, Aurora Hills, which the neighbor's house would be part of, does not have a functioning HOA, so I do not have that avenue to turn to.
