

2019 Stream Restoration Stabilization Notes:

- Temporary stabilization notes:
 1. Temporary stabilization for any disturbed areas on the floodplain and terraces adjacent to the restored stream channel shall be considered achieved using one of the following measures.
 - The disturbed area is uniformly covered with 2 to 4 inches of wood chips.
 - The disturbed area has been seeded with annual rye grass following the temporary seeding application periods found under the Anne Arundel Soil Conservation District's (AASCD) Vegetative Establishment Specification or 2011 Standards and Specifications for Soil Erosion and Sediment Control. No soil test, lime or fertilizer will be required.
- Permanent stabilization notes:
 1. Permanent stabilization for constructed stream banks greater than 6 inches shall be considered achieved when all stream banks are seeded (native seed mix) and lined with a fully biodegradable stabilization matting with appropriate strength properties dependent on local shear stress conditions.
 2. Permanent stabilization for disturbed floodplain and terraces adjacent to the restored stream channel shall be considered achieved using one of the following measures :
 - The disturbed area is covered with 2 to 4 inches of compost (applied over any wood chips used for temporary stabilization) and the native planting plan (including permanent seeding) has been implemented.
 - The disturbed area is covered with 2 to 4 inches of wood chips tracked into soil and the native planting plan (including permanent seeding) has been implemented.
 - The disturbed area is covered with 2 to 4 inches of topsoil (furnished or salvaged) and fully biodegradable stabilization matting installed per manufacturer's instructions and a native planting plan (including permanent seeding) has been implemented, regardless of soil treatment.
 - The disturbed areas shall receive hydroseeding or flexible growth medium (FGM) after the establishment of final grades and microtopography (if applicable) in accordance with the project construction details or Landscaping Plans.
 - The disturbed area has adequate vegetative establishment with 95% groundcover.
